

# Index

- airbags
  - and smart sensors, T12, T13, A4
- aircraft
  - and PVDF sensors, A4
- airport taxiways
  - use of PVDF sensors, A3
- alloys
  - amorphous iron alloys, T15
  - copper, T13
  - metallic glasses, T15
  - nickel and titanium (Nitinol), T13
  - shape-memory, T13
- amorphous iron alloys, T15
- amplification of signals
  - in motion detector, 3
  - of sound, 10A, 10, 25
- amplifiers, 10A, 15
- antilock brakes
  - and smart sensors, T12, A4
- apnea monitors, A22
- assessment
  - options, T30–T31
  - tips, 2, 8, 14, 34, 44
- auditory system
  - human, 13
- automobiles
  - airbags, A4
  - and smart sensors, T12, T13, T14, A4
  - antilock brakes, A4
  - door-monitoring system, 9
  - shock absorbers, T14
- barium titanate, A17
- baseball
  - use of PVDF sensors, A4
- beams (for building)
  - and smart sensors, T14
- biological materials
  - and piezoelectricity, A19
- biology
  - connections to, T16, 3, 11, 13
  - and piezoelectricity, A19–A20
- blood pressure cuff, A21–A22
- bones
  - and piezoelectricity, A19
- boxing
  - PVDF sensor, A4
- burns
  - treatment and piezoelectricity, A19
- carbon
  - electronegativity, 19
  - in dipoles, 25
  - in PVDF, 25
- ceramic-polymer composites, A18
- ceramics
  - piezoelectric materials, A17–A18
- charge distribution
  - change with stress, 35
  - on PVDF film, 26–27, A15
- chemistry
  - connections to, T16, 17
  - of smart sensors, A11–A15
- chocolate bars
  - and dipoles, 18
- coin counters (Design Project 1), 37–40
  - use of PVDF sensors, A4–A5
- collagen
  - and piezoelectricity, A19
- compression
  - effect on PVDF response, 35, A8–A10
- computers
  - equipped with smart sensors, T12
  - in smart sensor systems, T14, T15, 9, A3–A4
  - use of PVDF sensors, A6
- crystallinity, 26
  - in polymers, A14–A15
- crystallites, A14, A15, A17
- crystals, A16–A17
- Curie brothers (Jacques and Pierre), 16, A16–A17
- current, 27
- dart boards
  - use of PVDF sensors, A4
- deformation
  - effect on PVDF response, 28B, 35
- design in the classroom, T28
  - and scientific inquiry, T7
  - Design Projects, 37–40, 41–44
- dipole moments
  - in PVDF film, 25–26, A11
- dipoles, 17, 25
  - in chocolate bars, 18
- doping
  - ceramics, A17
- ear, human, 10–11, 13
  - similarity to piezo film microphone, 10B
- earthquakes
  - and smart sensors, T12
- electrical stimulation
  - and bone growth, A10
- electric field
  - effect on melted chocolate, 18
  - role in polarizing PVDF, 16B, 17, A14–A15
- electric potential, 27
- electrodes
  - applied to PVDF film, 25–27, A14, A15
- electronegativity, 19, 21
- electron flow
  - in circuit with PVDF, 27
- electrorheological (ER) fluids, T14, 18
- energy
  - conservation, A6
  - from the human body, A20
  - generation with PVDF film, A5
- engineering design
  - and smart sensors, T15
- ethene, 19
- ethylene, 19, A12, A13
- expansion
  - effect on PVDF response, 35
- eyeglass frames
  - of Nitinol, T13
- fencing
  - and PVDF sensors, A4
- fluorine
  - electronegativity, 19, 25, A11
  - in dipoles, 25
  - in PVDF, 21, 25, A11
- football
  - and PVDF sensors, A4
